The product is miscible with water and could be transported considerable distances if allowed to enter waterways. Even low concentrations in water give a pronounced white appearance.
The product will degrade only very slowly in the environment.
There is no evidence of any tendency for bioaccumulation.
In low concentrations (<100mg/litre) Ronabond Surface Sealer exhibits low toxicity to fish, but in higher concentrations may be harmful to fish and aquatic life.
Low concentrations of Ronabond Surface Sealer in water for sewage treatment do not affect the biomass; the polymer particles are absorbed onto the sludge and eliminated from the waste stream.

The BOD of dilute Ronabond Surface Sealer is relatively low (BOD₅ approx. 100ppm at 0.1% concentration).
